Remove Duplicate Product Image Extension

DSS

1. Overview

This Extension allows you to find duplicate product images from your product list and from this list you can easily remove them by Magento mass-action or individual delete.

Remove Duplicate Product Images is really used for people who importing product data and running the same import process over and over, Suppose If some products import fail and you aren't sure exactly which ones so you run the product import process again but this process duplicates the product images and It's very difficult task to find which product has duplicate images.

2. How Does It Work?

It will helps you to remove duplicate image of any product like, it has an ability to remove any product's duplicate image from using command.
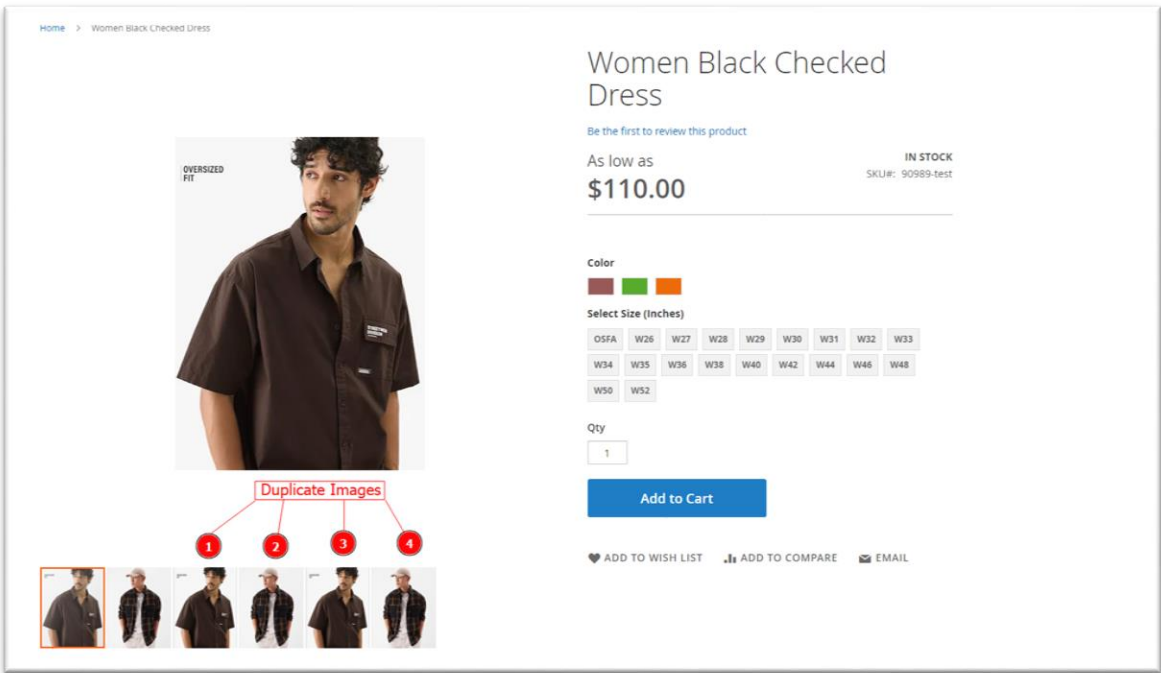

It has four commands for remove the products replicated images.

- Use this command for unlink your whole magento's products
  bin/magento duplicate:remove -u1

- Use this command for turn off dry run your magento's products
  bin/magento duplicate:remove -d0

- Combine unlink and turn off dry run for your magento's products
  bin/magento duplicate:remove -u1 -d0

- Specific on some sku of particular product or one or more products
  bin/magento duplicate:remove -u1 -d0 [sku's of any products]

Note:

- You can remove any specific product's duplicate by using the command.

- Once you remove duplicate image of any product specifically or remove whole magento's products it will not not again.

- When you remove the product or products your module must be enabled.

2.1 Example of Before Run the Command

2.2 Example of After Run the Command
